Add value to your business with ZADIP

About ZADIP GROUP

B

Founded in 2004, ZADIP has expanded from a small business to a multi-industry enterprise with operational teams in ICT, Networking, Software Development, Construction and Advertising. Our rapid expansion was only possible through the trust and support our customers put in our abilities.

Today, ZADIP GROUP, has over 7000 customers all over KSA and operates from two offices located in Riyadh and Dammam. Our vigilant focus on emerging technologies in the global arena and their local relevance is where our service proposition becomes unparalleled and fits every business need.

We have successfully tied partnerships with global leaders in technology, advertising and building frameworks harnessing best practices to enhance the dependability of our solutions and offerings. At ZADIP GROUP, we take our clients to the next level of business satisfaction. Professionalism and commitment are the key modules that make us stand out among our competitors. Talk to us and learn how we can add comprehensive value to your business.

Vision

Strive to create solutions that infuse new-age technology and information systems to develop communities and produce global leaders. Contest ideas with determination and combine talent with service to add value in everyday lives.

Mission

Make technology easy with comprehensive added value.

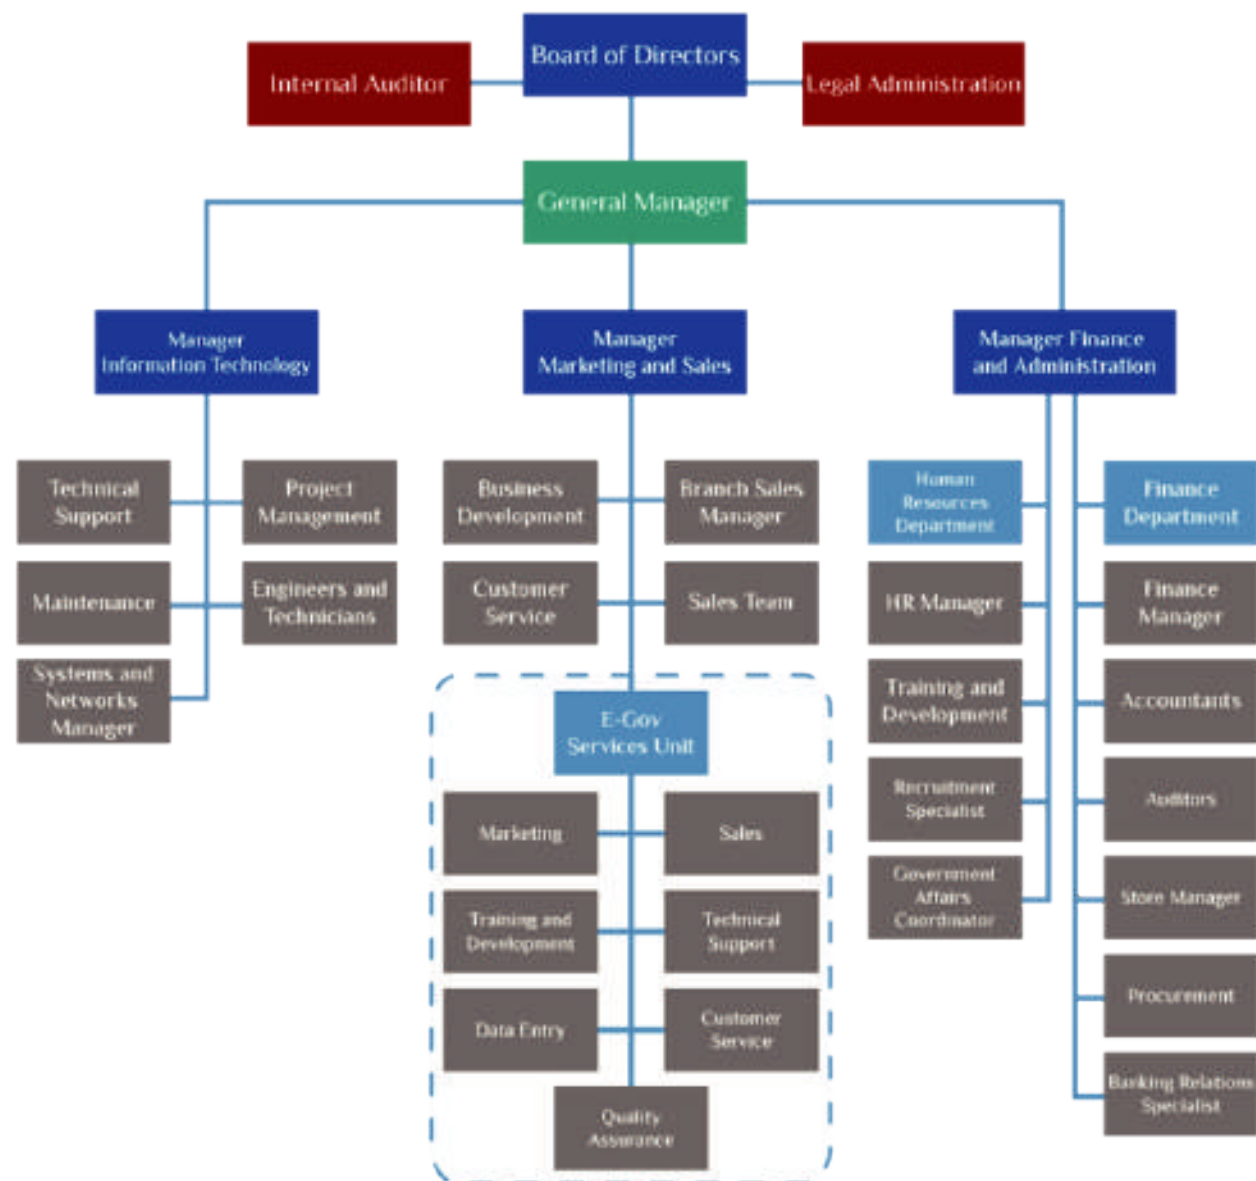

The primary goal of the ZADIP GROUP is to add value through our products and service experience. We recognize that to reach our goals, we need to develop the human resources for the group and set ongoing methodical learning.

The companies under the group work in different industries but all focus on one ultimate goal: Provide Comprehensive Added Value. To achieve this goal, our approach is to:

- Deliver solutions for the masses, support the community through service and provide comprehensive added value to develop businesses and the local economy.
- Assisting the public sector in increasing the efficiency of its work and services and raising the competition through developing a complete package of electronic government products.
- Provide business solutions and premium technology products with local and global partners.
- Building a content knowledgebase to support development, improve efficiency and increase user adoption.

Information and Communications Technology

Networking and Communications	A
Access Control and Surveillance	B
Building Management and Automation	C
Audio Visual Systems	D
Hotels and Resorts	E

ZADIP-IT provides end-to-end turnkey networking and communications solutions no matter how complex the scenario may be. Our team of diverse communications and network engineers have implemented networks ranging from single location to country-wide networks with reliable link dependability and security. ZADIP-IT, in collaboration with industry leading partners, also excels in the development of data centers and large scale server farms as the need may be. Some of our services are detailed below:

- i. Network cabling – UTP and Fiber Optics.
- ii. Network infrastructure design and planning.
- iii. IP telephony systems design and planning.
- iv. PCs and high performance systems.
- v. NAS and SAN storage design and planning.
- vi. Data center and server farm design and development.
- vii. UPS and alternate power generation design and planning.

In the internet age, information is the most important asset a company has and as such is the most prone to attacks and theft. ZADIP-IT provides seamless solutions whereby your business can not only become safe but also easily accessible to you from wherever you are. Our key partnerships with high ranking brands have brought in us the wisdom to assess your unique security concerns and address them with the right approach making sure we do not burden your pocket at all. Some of the areas covered in our services are as follows:

- i. Access control and time attendance.
- ii. CCTV and IPCCTV surveillance design and planning.
- iii. Master clock systems.
- iv. Voice evacuation systems.
- v. Fire alarm and smoke alarms design and planning.
- vi. Intrusion detection alarms and management.
- vii. Emergency lighting systems.

Whether you are a small business or a large enterprise, utilities costs are always a concern. At ZADIP, we believe technology has the answer to every concern and that its adoption should be easy and to this effect we have devised solutions that fit every pocket and every business size. Building management systems not only help manage your power consumption but also increase staff productivity and environmental comfort. ZADIP-IT provides the following:

- i. Building management system (BMS) design and planning.
- ii. Climate control system design and planning.
- iii. Utilities management systems
- iv. Lighting control and dimming systems design and planning.
- v. Integrated management software.

ZADIP-IT specializes in the design, installation and support of multimedia presentation technology, video and audio conferencing systems, and customized communication products. We offer a range of presentation and interactive communication meeting solutions. Our systems focus on the needs of each customer including high-definition projection technology, videoconferencing and telepresence for remote participation and distance learning. We also provide digital signage and advanced messaging systems for dynamic address and multimedia streaming, as well as content management including video recording and archival. Some of our services are detailed as follows:

- i. Professional sound systems.
- ii. Public address systems and background music.
- iii. Satellite master antenna television (SMATV) and IPTV.
- iv. Conference room and telepresence systems.
- v. Flat panel displays and video projection equipment.
- vi. Video wall systems.
- vii. Lighting systems.

Through the years, hotels and vacation retreats have had the most prominent exposure to new-age technology and the key reason for this is to increase staff productivity and the comfort of their guests. ZADIP-IT has been continuously focused on our clients' needs and their feedback, resulting in hotel systems that are easy to adopt, extremely reliable and very cost effective due to its low support requirements. Some of our services are detailed as follows:

- i. Room management systems and development.
- ii. Rooms locking and centralized management system.
- iii. Interactive displays and IPTV solutions.
- iv. Central telephone and services directory systems.

Software Development and Design

Custom Software Development	A
EKTEFA - All You Need	B
NAFETH - Car Rental Management System	C
Enterprise Resource Planning	D

ZADIP-SOFT was established in 2013 with the vision to provide the best alternate solutions to concerns faced by large companies and dynamic startups when dealing with management software. The local business owner is very unique and our countless hours of effort and interaction has built in us a knowledgebase that very few compete. We have developed websites, portals and automation software for every industry and in doing so have found that the chief concern that bothered our customers was not technology, but trust.

ZADIP-SOFT has gained a broad range of technical expertise with an unparalleled commitment to client satisfaction, we have become an authoritative option for companies looking for custom software development services, including supplementing in-house resources in the delivery of discrete project components, integration of the latest technology with existing enterprise infrastructure, creating complex interactive and multimedia environments.

As the business world shifts toward digital transformation, it's essential to have solutions that keep pace. Ektefa is at the forefront of this change, designed to be the first choice for HR

departments embarking on their digital journey. Ektefa is more than just a cloud-based HR management system; it's a comprehensive solution crafted by over 500 HR professionals from diverse industries. This collective expertise ensures that Ektefa not only meets but exceeds the expectations and needs of HR managers across the board.

Seamlessly integrated with key government and financial entities, Ektefa ensures smooth operations, offering a revolutionary upgrade for any organization ready to elevate its HR management to the next level. With Ektefa, you're not just managing HR—you're leading the future of your organization.

A small business is always been challenging due to its dynamism and growth objectives and hence the process of automation is most painstaking. A major player in the small to medium business industry is the car rental business whereby each business owner has their own set of offerings and services and desire to compete is at the top. This dynamism and operational difference has always been overlooked by solution providers not because their lack of capability but because the variance of procedures is vast and extremely hard to cumulate on a single platform.

Nafeth is a SAAS management software that manages all aspects of the car rental business. It provides dynamic anywhere-anytime intelligent reports and accessibility that can take your car rental business to the benchmark of global companies. Nafeth additionally comes integrated with TAMM, a traffic department service making renting, authorizing and managing your car fleet a single screen function.

Today

Microsoft
Dynamics

ZADIP prides in placing itself as a local business improviser. We understand the local business environment and are

ready in theory and technology to support any industry we come across. One of the major concerns that companies or enterprises face is unifying information on a single system and consolidation of data. Enterprise Resource Planning (ERP) does sound complex but in essence it is only a matter of linking people with processes. ZADIP uses present business processes and digitizes those making organizations more effective and planned. We use commercial software as well as open source solutions to get the most adequate system planned for our customer and in process make sure their transition is simple, comfortable and exciting.

No matter what your company type or scale is, an ERP is always the best tool to start and grow smart. To learn about our industry specific solutions, contact us and let us handle the rest.

E-Government services

Human Resources & Elm Cloud Email E

This service allows organizations to explore resident workers data and execute passports procedures online anytime and anywhere without the need to visit passports office.

Tamm service helps vehicles' owners in Saudi Arabia to get all updated information of their respective vehicles from their governmental sources, to review and control data simultaneously.

The screenshot shows the Tamm service website. At the top, there is a header with the Tamm logo, a navigation bar with links like 'Home', 'How To Subscribe', and 'Contact us', and a user profile icon. Below the header, there is a main content area with a green banner that says 'تم تخفيض المسافات' (Tam reduced distances). The main content area is divided into two sections: 'Tamm' on the left and 'امتيانكم' (Amteyakum) on the right. The 'Tamm' section contains a description of the service and a link to 'How to use the service'. The 'امتيانكم' section contains a login form with fields for 'Username' and 'Password', a 'Login' button, and links for 'Forgot My Password', 'How To Subscribe', and 'Vehicle list validation'.

إفادة
